

Yamamura Photonics Policy for Responsible Supply Chain of Minerals

Yamamura Photonics committed responsible sourcing practices to avoid the procurement of parts and materials containing conflict minerals (tin, tantalum, tungsten, and gold) or cobalt that may be linked to armed group financing, human rights abuses such as child labor, and environmental destruction in conflict-affected and high-risk areas, in accordance with the "OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas."

1. We request our business partners to procure minerals from smelters that are certified under the Responsible Minerals Assurance Process (RMAP) as recognized by the Responsible Minerals Initiative (RMI).
2. For Suppliers, Yamamura Photonics will continue to inquire into the supply chain, including identifying the country of origin and smelters of the minerals, using tools such as the Conflict Minerals Reporting Template (CMRT) and the Extended Minerals Reporting Template (EMRT), which are provided by the RMI (Responsible Minerals Initiative).
3. In cases that potential risks related to smelters within the supply chain are identified, Yamamura Photonics will take appropriate corrective actions such as requesting suppliers to procure materials from RMAP-certified smelters.
